MSc student (MVA, ENS Paris-Saclay) in mathematics & deep learning, applying in Fall 2026 for PhD entry in 2027

Education

École Normale Supérieure Paris-Saclay (ARWU World #13)					Sept 2025 – Aug 2026	
Master M2 – Mathematics, Vision, Learning (MVA)			Grade: 83.2/100	GPA 4.0	Paris, France	
Large Language Models for Code & Proof			98.5/100	GPA 4.0		
Geometry Processing & Geometric Deep Learning			89.5/100	GPA 4.0		
Detection Theory			85/100	GPA 4.0		
Probabilistic Graphical Models & Deep Generative Models			82.5/100	GPA 4.0	...	
Université Paris-Saclay (ARWU World #13)					2024 – 2025	
Master M1 – Artificial Intelligence			Grade: 75.1/100	GPA 3.7	Paris, France	
Mathematics for Data Science			87.5/100	GPA 4.0		
Hands-on NLP			86/100	GPA 4.0		
Research Project			80/100	GPA 4.0		
Deep Learning			77/100	GPA 3.7	...	
Sorbonne Université (ARWU World #43)					2021 – 2024	
BSc. Double Major in Mathematics and Computer Science			Grade: 77.5/100	Paris, France		
Lebesgue Integral on $\mathbb{R}^n$			98/100	GPA 4.0	top 1.4%	
Data Sciences			95.5/100	GPA 4.0	top 3%	
Algorithms I			83/100	GPA 4.0	top 7%	
Probabilities I			75.5/100	GPA 3.7	top 11%	...

Research Experience

CEA List – Laboratory of Vision and Learning for Scene Analysis (LVA)		Saclay, France
Research Engineer Intern, supervised by PhD Researcher		Apr–Oct 2026 (ongoing)
- Designing multimodal architectures that fuse camera semantics with radar range/velocity into a persistent, geometry-grounded 3D latent representation, decoupled from sensor modality and viewpoint, for scene understanding in autonomous vehicles. - Developing scalable training and benchmarking pipelines on real-world autonomous driving datasets (nuScenes; 3D detection, 3D semantic segmentation), turning research methods into production-ready solutions.		
Huawei Research Center		Munich, Germany
Research Engineer Intern, supervised by PhD Researcher		May–Aug 2025
- Extended Meta AI's OrienterNet for viewpoint-invariant image-to-map localization, designing multimodal architectures (Fourier encodings, Graph Neural Networks) that ground perception in geometry rather than raw pixels; raised recall@1m position / yaw accuracy by +4% over SOTA OrienterNet. - Deployed reproducible Docker-based training and inference environments for scalable experimentation.		
Sorbonne Center of Artificial Intelligence (SCAI)		Paris, France
Research and Developer Intern		May–Jul 2024
- Built transformer-based tool for large-scale text comparison with efficient complexity. - Deployed interactive web demo using JavaScript and Python.		

Awards

Huawei TechArena – 2nd Prize	Munich, Germany, 2025
HRTF Spatial Audio – \$3k award	
- Presented project at award ceremony before judges. - Trained models on joint image and HRTF spatial audio data.	

Skills & Knowledge

Methods & Algorithms	Coding / Software / Hardware
Detection & Fusion query-based camera–radar fusion (DETR-family, cross-attention, radar-guided queries)	Core Python (fluent), C++ (proficient), PyTorch (advanced), MMCV
Scene Representation BEV features, image-to-BEV transformation, radar point clouds	ML Stack TensorFlow, Keras, scikit-learn, NumPy, pandas, SciPy (proficient)
Localization image-to-map localization, neural BEV matching	Infrastructure Docker, Linux, GPU cluster training (proficient)
Foundations transformers & attention, diffusion & generative models	Web FastAPI, JavaScript (basic)
	Languages French (native), English (fluent), German (basics, A2)
